/note="Organ: Pool of sugarcane calli submitted to low
(4oC) and high (37 C) temperature stress; Vector:
pslurScript; Site 1: EcoRI; Site 2: XhoI; An
unidirectional cDNA library generated from [Pool of
sugarcane calli submitted to low (4oC) and high (37 C)
temperature stress]. CDNA was prepared from polyA+ mRNA
using ZAP - cDNA Synthesis Kit (Stratagene). The
double-strand cDNAs were fractionated in a sepharose CL-2B
40cm-columns and fragments sizing between 0.8 and 1.5 Kb
were directionally cloned into the vector. Details of
each source of RNA and library construction can be
obtained at http://sucest.lad.ic.unicamp.br/public"

/note=Tvector: Lambda ZAP-II XR.; Site_1: EcoR I; Site_2: //note=Tvector: Lambda ZAP-II XR.; Site_1: EcoR I; Site_2: //note=Tvector: Lambda ZAP-II XR.; Schietosoma japonicum (Anhui, P.R. China, strain), of mixed sex, were perfused from the mesenteries of experimentally infected mice and rabbits at the Queensland Institute of Medical Research, Brisbane, Australia (QIMR), and stored for several months in liquid nitrogen. Subsequently, mRNA was isolated at the QIMR from lysates of these worms by oligo dT chromatography, using a kit from pharmacia. The mRNA was then shipped to Clontech, Palo Alto, CA, USA, who constructed a cDNA library. First strand synthesis was primed with an oligo-dT-XhoI-primer and synthesis was accomplished with RNAse H and T4 DNA polymerase. The double stranded cDNA was ligated to EcoRI linkers, digested with EcoRI and XhoI, and ligated into the phagemid vector lambda ZAP II XR. After construction of this directional library by Clontech, it was returned to the QAMR. During analysis of the library at the QIMR, we
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hanzg@chgc.sh.cn.

LOCUS DEFINITION RESULT 11 AW036134/c

AW036134
383 bp mRNA linear EST 18-MAY-2001
EST274510 tomato seed, TAMU Lycopersicon esculentum cDNA clone
cLEE1E23 similar to periplasmic phosphoanhydride phosphohydrolase
precursor, putative, mRNA sequence.
AW036134

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
